SUMMARY

CSE undergraduates build Curebyte, a Flutter-based hospital management system, alongside native Android projects. Proficient in Java, Solidity, and Dart with hands-on experience designing role-based systems, authentication flows, and UI logic.

EDUCATION

B.Sc. in Computer Science & Engineering — Khulna Khan Bahadur Ahsanullah University*Expected [Grad Year]*
Currently in 2nd year (2-2 term) CGPA: [3.87 / 4.00]

Higher School Certificate (Science) — Bangladesh Noubahini School and College, Khulna *2023*
GPA: 4.00 / 5.00 • Jashore Board

Secondary School Certificate (Science) — Miksimil Rudaghara High School *2021*
GPA: 4.44 / 5.00 • Jashore Board

SKILLS

Languages: Java, Html ,CSS,C, Dart (learning: Python, React, Solidity)
Frameworks / Tools: Flutter, Android Studio, Git/GitHub,Antigravity
Other: MS Office Suite (Word, Excel, Access, PowerPoint)

EXPERIENCE

Data Entry Operator — Nation It (Earnyway.com) *Apr 2024 – Jun 2025*

- Maintained data integrity across [60 records/day] by cross-verifying entries against source documents, reducing error rate by [80%] using [Excel / internal system].
- Processed [1500] records within deadline-driven cycles by prioritizing high-volume batches, sustaining on-time completion over a 15-month period.

PROJECTS

Curebyte — Hospital Management System (Flutter) with Mithila Farzana (UI/UX) *Complete*

- Built a role-based access system supporting 3 user types (patient, doctor, admin) as measured by fully separated dashboard flows, by architecting a multi-method authentication layer in Flutter.
- Streamlined patient care tracking by enabling digital prescriptions and medical history logs, as measured by eliminating paper-based record handoffs, by implementing structured Flutter data models and an admin panel.

Scientific Calculator App — Native Android — Java/Kotlin

- Delivered accurate multi-function computation (trigonometric, logarithmic, exponential operations) as measured by [X] supported functions, by implementing a custom expression parser and evaluator.
- Ensured crash-free calculation handling as measured by correct precedence and error handling on edge cases (e.g., divide-by-zero, invalid syntax), by building input validation logic natively on Android.

Personal Portfolio Website — HTML / CSS

- Improved site navigability across 4+ sections as measured by seamless anchor-based navigation, by implementing a responsive navbar with in-page linking and structured project cards.
